Linux Command-Line OSINT Tools

Filtered from the mirrored OSINT Cabal data. This file keeps only tools that are clearly Linux CLI oriented and excludes obvious web-only redirects, dashboards, and GUI-first entries. The explanations are concise summaries based on the mirrored category labels and the blurbs available in the local copy of the site.

Frameworks and Toolkits

TOOL	WHAT IT DOES
Odinova	Multi-module Python OSINT toolkit for usernames, email, domains, and reconnaissance tasks.
Mr. Holmes	Command-line OSINT framework that automates username, domain, and profile lookups.
Recon-ng	Modular reconnaissance framework for collecting, correlating, and exporting OSINT data.
X-OSINT	Terminal-based OSINT toolkit that bundles several investigation modules into one workflow.
Laitoxx	CLI multi-tool for running common OSINT lookups from one menu-driven interface.
ReconFTW	Bash-driven automated reconnaissance framework for domains, assets, and web targets.

Username and Social Discovery

TOOL	WHAT IT DOES
Sherlock	Searches many social networks and websites for a target username.
Maigret	Checks hundreds of sites for usernames and builds a profile footprint report.
Blackbird	Fast username enumeration tool focused on social platform account discovery.
WhatsMyName-Python	CLI implementation of the WhatsMyName project for username footprinting.

TOOL	WHAT IT DOES
Nexfil	Runs username searches across many services to identify likely matching accounts.
Social-Analyzer	Command-line username analysis tool for wide social-media account checking.
Tracer	Username tracing tool for finding linked identities and account reuse online.
Enola	Go-based username search utility for checking aliases across multiple services.
DetectDee	Social OSINT helper for locating people and accounts across public platforms.

Email and Account Discovery

TOOL	WHAT IT DOES
Zehef	Checks whether an email is registered on multiple platforms and performs a basic breach check.
Holehe	Tests whether an email is registered on a large set of websites and services.
Mailsleuth	Looks for account usage and service presence tied to an email address.
Mailcat	Finds usernames and account clues associated with an email address or domain.
Hashtray	Checks whether an email or username is associated with a Gravatar profile.
Ghunt	Extracts publicly reachable Google account information from an email address.
H8mail	Searches breach data and dumps for addresses, aliases, and exposed credentials.
Eyes	Performs deeper email reconnaissance to uncover social and account presence data.
SocialScan	Checks whether an email or username is already taken on popular services.

TOOL	WHAT IT DOES
Phone Infoga	Investigates phone numbers for carrier, format, and public OSINT clues.
Email2WhatsApp	Attempts to connect an email address to WhatsApp-related account evidence.

Domain, Web, and Network Recon

TOOL	WHAT IT DOES
The Harvester	Gathers names, emails, hosts, subdomains, and URLs from public sources.
Final Recon	Runs all-in-one website reconnaissance against a target domain or URL.
Subcat	Performs passive subdomain discovery from multiple data sources.
Photon	Web crawler that collects URLs, endpoints, assets, and intelligence from a target site.
Bbot	Automated OSINT scanner for domains, hosts, subdomains, and exposed services.
Spiderfoot	Automates many OSINT checks against domains, IPs, names, and accounts.
Amass	Enumerates subdomains and maps external attack surface and network relationships.
Subfinder	Fast passive subdomain enumeration tool written for command-line use.
Katana	High-speed crawler for discovering endpoints, paths, and web assets.
Go Witness	Takes screenshots and fingerprints web services exposed on a target.
GitHound	Searches GitHub repositories for exposed secrets and sensitive strings.
Webdiver	Extracts and analyzes website information from the command line.
Nmap	Scans hosts and ports to identify basic network exposure and services.

TOOL	WHAT IT DOES
Uscrapper-Vanta	Harvests emails, usernames, and related web data from public sources.
Sublist3r	Enumerates subdomains using search engines and DNS-based techniques.
ASN	Looks up autonomous system ownership and related IP range information.
Unfurl	Parses URLs and transforms them into structured, searchable data.
ProxyScraper	Finds and tests publicly available proxies from the terminal.
VinDecoder	Queries the NHTSA VIN API to decode vehicle and manufacturer details.

Searching, Dorking, Crawling, and Archives

TOOL	WHAT IT DOES
Dorks Eye	Automates Google dorking queries to surface publicly exposed information.
OxDork	Helps generate and run targeted dork-based search queries.
XNL Dorker	Runs search-engine dorking to collect fast exposure and indexing hits.
Dorksint	Performs quick dork-based searches to pull immediate information on a query.
Go Crawler	Go-based crawler for collecting links, content, and page data from targets.
GoTOR	Routes requests through Tor for privacy-focused scraping and browsing tasks.
DorkScout	Go command-line helper for dorking and search-result collection.
Hakrawler	Fast web crawler used for endpoint discovery and content enumeration.
Ferret	Headless browser automation tool for scripted extraction and page analysis.

TOOL	WHAT IT DOES
WayBack URLS	Pulls historical URLs for a domain from the Internet Archive.
Way BackPack	Downloads archived pages and files from the Wayback Machine.
The Time Machine	Investigates historical snapshots of a website for past exposed content.
HuntPastebin	Searches Pastebin-style content for leaks that match a target query.
Hash ID	Identifies likely hash types from a hash string or sample value.

Platform-Specific CLI Tools

TOOL	WHAT IT DOES
Toutatis	Instagram-focused reconnaissance tool for user metadata and account details.
Medor	Instagram OSINT tool used for account and email-related reconnaissance.
SnapIntel	Investigates Snapchat usernames and related account information.
Geogramint	Telegram OSINT tool for phone-number and account correlation.
Masto	Queries Mastodon accounts and posts for platform-specific investigation.
LinkedIn2Username	Builds candidate usernames and email patterns from LinkedIn name data.
WhatsOSINT	Runs WhatsApp-related OSINT lookups from the terminal.
MastOSINT	Searches Mastodon for profiles, posts, and federated social activity.
OSINTSky	Bluesky investigation suite that queries the platform through its API.
OSINTChan	Queries 4chan data to inspect threads, posts, and related activity.
TeleGramSint	Uses Telegram data sources to pull user and channel information.

TOOL	WHAT IT DOES
TikTok UserData	Pulls TikTok username metadata and related public profile details.
Proton Intelligence	Fetches limited OSINT about a ProtonMail address from terminal workflows.
